

Requirements and Login Styling

User Stories

#	As a	I want to	So that
1.1	User	register my name, email, and password into the fields	I can create a user account for myself.
1.2	User	view information about the team in the front page	I can read about each teammate.
1.3	User	sign in with my credentials	I can access my account via my information
1.4	User	sign out of my account	My account remains secure when I finish using the application
1.5	User	Navigate between the login and team page	I can easily access the information and features I need.
1.6	User	See clear and consistent styling across the login and team pages	I can easily understand and use the application

Acceptance Criteria

- **AC1: Required fields render correctly**
 - When a team member has their Name, Role, and Blurb set, all three fields should display correctly on the team page.
- **AC2: Missing photo**
 - If a team member has no photo uploaded, the page should show a placeholder avatar, instead of a broken image.
- **AC3: Blurb exceeds character cap**
 - If a team member's blurb goes over the 200 character limit, it should be truncated with an ellipsis, and the card layout should not break as a result.
- **AC4: Long name**

- If a team member's name is unusually long, it should be truncated or wrapped in a way consistent with how blurbs are handled, without breaking the grid alignment.
- **AC5: Role restricted to valid set**
 - Each team member's role should only ever display as one of PM, BA, UX, Dev1, or Dev2
- **AC6: Login styling does not affect auth logic**
 - After the login page is restyled, authentication behavior, session handling, and error messages should all remain exactly the same as before the restyle, whether the credentials submitted are valid or invalid.

Team Page Content Fields

Field	Validation	Display Rule if Missing
Name	N/A	N/A
Photo	Image File Only	Show Placeholder
Role	PM / BA / UX / Dev1 / Dev2	N/A
Blurb	Max 200 characters	Truncate with ellipsis at cap

Login Scope

- Should be styling only, no changes to authentication logic, session handling, or credential validation.
- Existing authentication errors must continue to behave in the same way.
- Styling changes must not alter error handling.

Edge Cases

1. Missing Photo:
 - If a team member doesn't have a photo, then a appropriate placeholder should be displayed.
 - The missing photo shouldn't cause any page layout to break.
2. Long Blurb:

- If a member's blurb is too long then the text should wrap or be continued appropriately so that it doesn't break the page layout.
3. Long Names:
- If a member has a long name, then the name should wrap or otherwise remain readable without overflowing the page.
4. Authentication Errors:
- The styling should not affect or change authentication error handling.

BA Design Validation

Login Page Validation:

- Email field is represented in the login page design
- Password field is represented in the login page design
- Sign-in action is represented in the login page design
- Login changes remain within the agreed styling-only scope
- No changes are required to the existing authentication logic
- No changes are required to session handling.
- Existing authentication error behaviour remains unchanged

Team Page Validation :

- Team name is represented in the team page design
- Each team member's name is represented
- Each team member's photo is represented
- Each team member's role is represented
- Each team member's blurb is represented
- The design accounts for a placeholder when a team member does not have a photo
- The design accounts for long team member names without breaking the page layout
- The design accounts for longer blurbs without breaking the page layout

Design Review Outcome

The UX designs were reviewed against the requirements and acceptance criteria. All required login and team page content is represented in the designs. The login page remains within the agreed styling-only scope, with no changes required to authentication behaviour. No outstanding requirements gaps were identified.
